

Year 2 Unit 15 Extension Activity

We can round numbers to the nearest 10

- You can use rounding to help in addition or subtraction
- For example, if we have to add $33 + 59$, we know that 33 will round to 30, and 59 will round to 60. $30 + 60$ is 90 so the answer to our question will be approximately 90.
- Similarly if we have $78 - 27$ we know that 78 will round to 80 and 27 will round to 30. $80 - 30$ is 50 so the answer to our question will be approximately 50

Make up a range of additions and subtractions of two two-digit numbers. Round each of the numbers to the nearest 10 and calculate the approximate answer in your head.
